

# FEAR RESPONSES IN MINECRAFT MOBS

5 ways our bodies automatically protect us from harm

## FIGHT

Physically fighting/  
pushing/struggling,  
saying 'no'

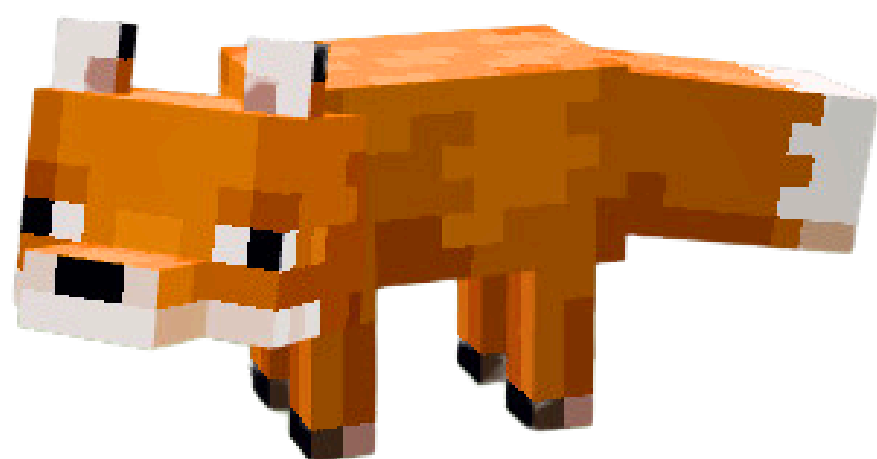

## IRON GOLEM

Usually passive, Iron Golems  
attack anything that hurts  
them or a Villager

## FLIGHT

Running, hiding,  
backing away

## FOX

Foxes will run fast to get  
away from players as well as  
wolves and polar bears

## FREEZE

Going tense, still  
and silent

## PANDA

In Java Edition, Worried  
Pandas are scared of  
thunder and will cover their  
eyes. In real life rabbits  
freeze but they actually  
don't in Minecraft!

## FLOP

Like freeze but your  
muscles become  
loose

## ARMADILLO

Armadillos curl up in to a ball  
if they are attacked. It's not  
quite 'flopping' but it's the  
closest we could find!

## FRIEND/FAWN

Calling for help or  
befriending the  
dangerous person to  
try and get them to  
stop

## VILLAGER

Villagers can get help from  
players and Iron Golems  
when attacked by Pillagers

**What other mobs do you think  
show these 5 fear responses?**
